

July 2026

We Knew Summer was Coming...Wow!

A few short months ago, I made comments in this letter about what a winter it was – the single-digit temperatures, the amount of snow, how we hadn't seen a winter like that in a while. Now, since June, we've seen two recorded heat waves thus far and grey skies from the smoke from Canadian wildfires making air quality dangerous. Weather reports have become breaking news!

To deal with these issues, our air conditioning systems are working hard keeping our homes cool and ensuring our indoor air quality. This underscores the need to keep our HVAC systems well-maintained. Here at Tracey Energy, our service team has had over 100 calls for emergency service because of AC systems needing repairs.

To support our customers, we are continuing our \$600 rebate offer on new systems, and we are still recommending an annual system inspection. Call our service team today at 203-777-5747 if you would like to talk about your AC needs or if you haven't had your current system cleaned and your filters changed. These aren't "nice to do" appointments: They ensure your system is working properly, lasts longer, and doesn't need a costly emergency repair.

Although we are well into July, there are still many summer days ahead of us. Stay safe and enjoy our beautiful state whenever you can. There are craft shows, outdoor concerts, beautiful parks, our amazing beaches, and so many other wonderful summer activities still waiting for you to enjoy!

Best,

Jennifer Tracey-Carlo

Valuable Offers!

\$600* OFF
A New Central A/C System

Call us now for your free quote, including equipment recommendations on the excellent brands we offer.

203-777-5747

**Plus sales tax. Offer expire 9/15/2026.*

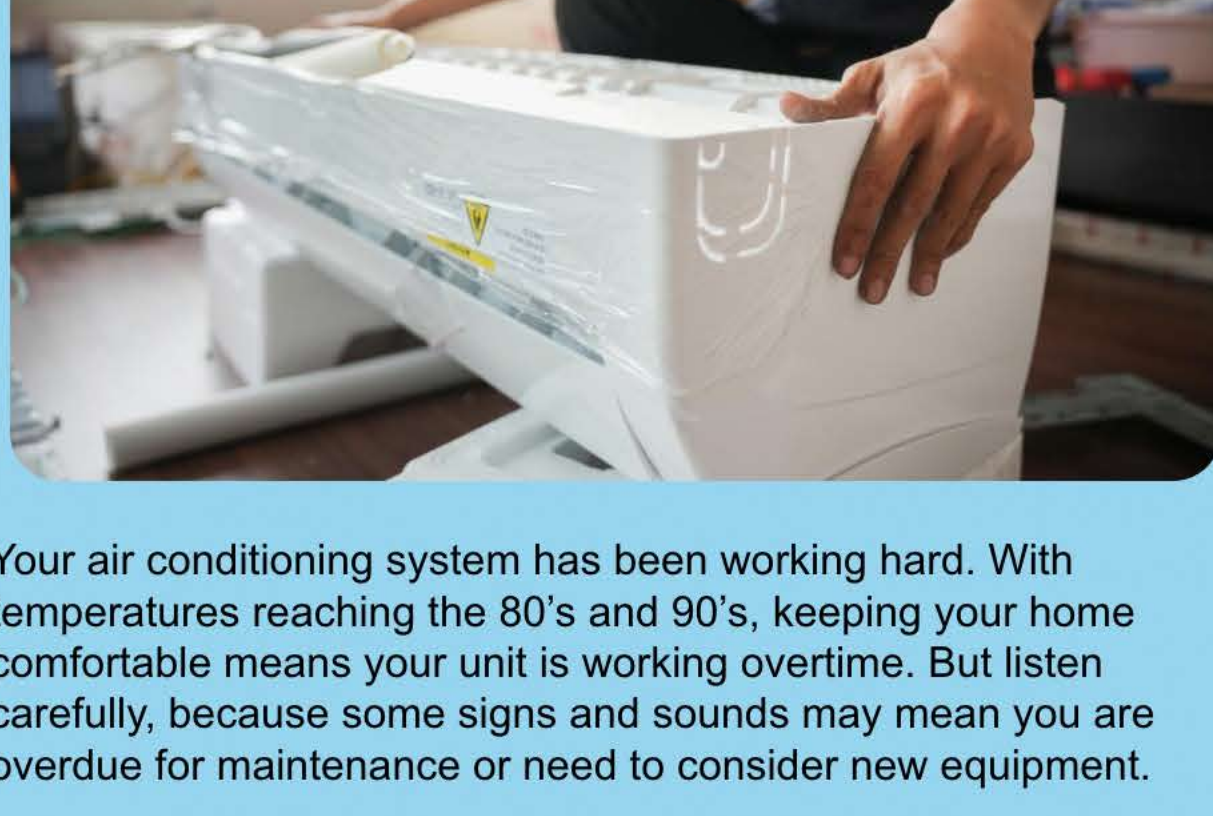

\$25* OFF
Annual A/C Start & Test

A comprehensive, 12-point checkup of your system, including checking all system pressures and temperatures and changing air filters.

Schedule Your Appointment

**Plus sales tax. Offer expire 9/15/2026.*

Are You Hearing Strange Noises? Is Your AC System Telling You Something?

Your air conditioning system has been working hard. With temperatures reaching the 80's and 90's, keeping your home comfortable means your unit is working overtime. But listen carefully, because some signs and sounds may mean you are overdue for maintenance or need to consider new equipment.

Are you noticing banging noises coming from your equipment? What about metallic grinding or other sounds that indicate your AC units are struggling? These could indicate issues with blower fans, belts, or a broken component.

Is your home evenly cool? Or are there areas that seem colder than others? You could have an airflow issue. Blocked ducts, a blower issue, or dirty air filters can all result in uneven airflow and a struggling system. It can also mean your energy bills are going up, even though you haven't changed your AC settings.

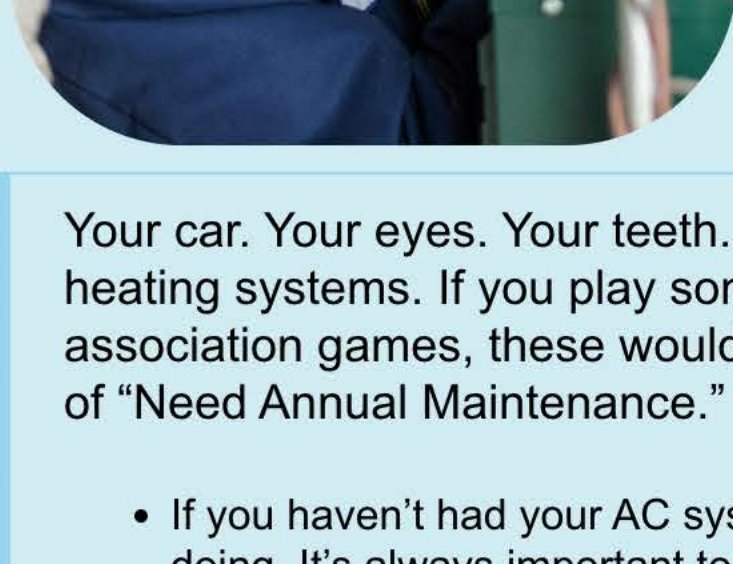

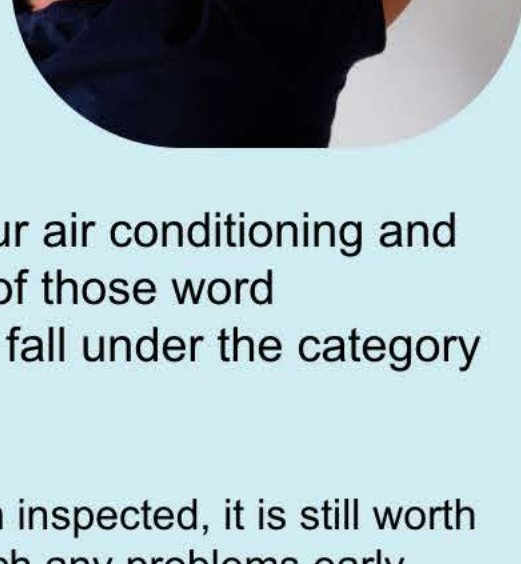

Are you noticing your system shuts off and turns on sporadically? That could mean your system is under stress, and that could lead to it breaking down. These are the situations where normal maintenance can identify and fix an issue that could become a big problem.

Can you use the word "vintage" to describe your system? We'd love to believe they can last forever, but they don't. Most systems have a 15-20 year lifespan. And new systems with new technologies can really improve efficiency and save you money.

Have you refinished your basement or the space above the garage? Maybe added a new room? Perhaps your current AC system isn't big enough to cool this additional space. We have solutions! Ductless units, or expanding your current equipment may be options.

Annual Maintenance is Essential Equipment Care

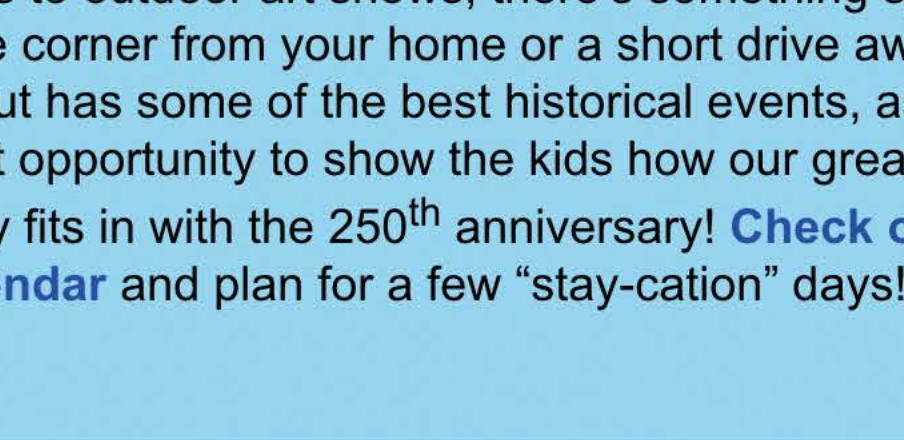

Your car. Your eyes. Your teeth. Your air conditioning and heating systems. If you play some of those word association games, these would all fall under the category of "Need Annual Maintenance."

- If you haven't had your AC system inspected, it is still worth doing. It's always important to catch any problems early. Something relatively simple like a loose wire or clogged drain can lead to a system breakdown if they aren't addressed. An inspection would find issues like these and includes cleaning all filters, checking and adjusting refrigerant levels, and checking all system parts. This is all essential for a system to operate at peak efficiency. The cost of an annual inspection is a much better investment than the cost of an emergency repair.
- The same is true for your heating system. Now is the time to schedule an annual inspection to ensure it is working as efficiently as possible. A well-tuned system could use up to 10 percent less fuel than an untuned one, and that could mean more than \$300 in fuel savings over the season at today's current prices.
- Our HVAC team is professionally trained with years of experience and can consult with you about the age of your equipment, options for new equipment, and the efficiency you can gain.

Whether you're overdue for an AC inspection, it's time to consider replacement options, or you're ensuring your heating system is ready when those colder winds start to blow, let's get an appointment on the calendar for a day and time that is most convenient for you. Call our customer service team at 203-777-5747.
